

SECURITY SOLUTIONS

Organizations today leverage IT to gather and share almost all of their information, both within and beyond their organization's boundaries. In an increasingly connected world, managing and protecting this business information is critical to a company's success. A secure infrastructure allows you to reduce risk, safeguard critical assets and meet compliance standards across even the most complex IT environments. With industry leading technologies, Prolifics helps organizations across all industries efficiently manage user identities and gain better control of virtual, physical and cloud infrastructures.

Prolifics' security solutions are designed to deliver better control of information and how it is used. Our experts will assist you in getting a clear understanding of your security infrastructure to identify areas that can be improved or better supported. With years of experience implementing security solutions across the IBM portfolio, Prolifics is able to develop a security strategy that fits any company's unique business requirements and implement solutions that will enable the proactive management of users and their access to business information. Our security practice has deep knowledge and expertise of the regulatory environment businesses are faced with today and will ensure that all compliance and internal security standards are met.

Power Up with Prolifics Power Tools!

Prolifics brings its "Power Tools" for any IBM Tivoli Identity Manager engagement, including ReTest Testing Framework, DrillBits Administration and Management, and Automatic Workflow Analysis and Documentation, helping to:

- ◆ Shorten the implementation lifecycle by accelerating projects by at least 30%
- ◆ Reduce the overall cost of the project
- ◆ Ensure the high quality your organization requires

Identity Management

Identity Management

Prolifics' Identity Management solutions mitigate security risks involved when providing users with access to mission critical information and applications, helping to efficiently manage user identities across an enterprise. Leveraging IBM Tivoli Identity Manager, Prolifics' security experts automate lifecycle management of user roles, identities and access rights, providing central management across IT resources from user creation to termination. By increasing accountability through audit trails, organizations are able to meet government regulations such as HIPAA, NERC CIP and SOX Compliance.

Role-Based Access Control for Governance

Role-Based Access Control (RBAC) for Governance

Enable stricter access controls and find out exactly who has access to what across your enterprise. Prolifics helps implement efficient Access Governance strategies to help meet internal and external security guidelines by ensuring that only the right people have access to critical applications and data. With RBAC, organizations are able to automate and streamline the process of aligning security entitlements to a person's organizational responsibilities, which consists of simply assigning roles to each account.

Federated Identity Management

Federated Identity Management

Prolifics enables secure information sharing between trusted users and the ability for internal and external users to access partner sites. Federated Identity Management provides central management of all user identities, helping an organization reduce costs, operate more efficiently and minimize security risks. With federated single sign-on, users are able to sign In once then access multiple applications and separately managed infrastructure domains through partner authentication.

Prolifics Service ID Governor

Prolifics Service ID Governor

Prolifics Service ID Governor extends IBM Tivoli Identity Manager to help address identities used by systems, software and automated processes. Prolifics' tool allows an organization to assign responsibility to non-personal accounts and delivers centralized management of service IDs on target systems.

In addition to these solutions, Prolifics offers solutions that leverage IBM WebSphere DataPower and IBM Rational AppScan to help organizations further increase security and minimize risks across the firewall and with Web applications.

“Prolifics helped us implement access control, dramatically helping us enforce HIPAA compliance to ensure people have the access that they need to perform their responsibilities and their job roles, and to ensure that when they do leave our organization their access is suspended to secure the patient data that we have.”

— Matt Hickmott, Tampa General Hospital

Get Started with Prolifics

Identity and Access Management Health Assessment

- ◆ Prolifics’ security experts will perform a comprehensive assessment of your IBM Tivoli environment to identify vulnerabilities that are affecting performance and security.
- ◆ Over the course of two weeks, Prolifics will work either remotely or onsite to provide an architectural review and organize findings into a valuable report with recommended next steps.

Role-Based Access Control (RBAC) Adoption Workshop

- ◆ Prolifics’ security experts will work closely with you during this workshop to develop your RBAC strategy.
- ◆ We will highlight the value RBAC and allow you to visualize the solution and how it will benefit your access governance strategy.

Related Service Offerings

We provide SOA and BPM solutions to help our customers improve and automate business processes through modeling, process choreography and optimization. Our experts are experienced in bringing integration and business process management to organizations across all industries, helping customers be more flexible to meet changing business needs.

SOA & BPM

Effective collaboration allows you to connect with colleagues, business partners, suppliers and customers to carry out daily business activities. With Portal and Web Content Management solutions, you have immediate access to critical business information across enterprises. Our certified experts can tightly integrate your Web content within Portal, leading to greater business advantages.

Portal and Web Content Management

A priority to any successful portal application launch is a focused effort around assessing its quality and determining how the solution meets expectations. We can deliver software quality assurance services and a test automation framework to improve testing cycle times, ensure successful rollouts, and increase confidence in business applications.

Quality Assurance Services

Business processes depend on the performance and availability of an organization’s applications. Our monitoring and automation experts ensure the health of your IT infrastructure by implementing solutions that monitor, analyze and resolve problems at the service, transaction, application and resource levels.

Monitoring and Automation

About Us

Prolifics is the largest systems integrator specializing in IBM technologies. Having garnered awards for its solutions and technical excellence across IBM’s entire software portfolio, Prolifics provides expert services including architectural advisement, design, development and deployment of end-to-end SOA, Portal and Security solutions. SemanticSpace, Prolifics’ parent company, is a global IT services firm providing application development, testing, application maintenance and outsourcing services. Bringing over 30 years experience and a strong global presence across US, Europe and Asia, the SemanticSpace companies offer end-to-end services combined with the market’s most seasoned and skilled consultants and the dedicated care and attention that comes from a highly-specialized, boutique company. By combining application frameworks, prebuilt components, custom development expertise, a governance framework and a blended shore model, we help organizations decrease risk in complex software development and deployment investments, improve time to market and increase success of business strategy execution.
